

## Brain In Gear

Can you list 3 different textile components?

Can you list 3 types of embroidery stitches?

**Cotton** is a soft \_\_\_\_\_ that grows with the \_\_\_\_\_ of the cotton \_\_\_\_\_. (Fibre is long and thin, like \_\_\_\_\_). After the cotton fibre is gathered from the plant, it can be made into thread. The cotton thread can then be made into \_\_\_\_\_, such as denim and calico. The fabric can be used to make clothes for people and many other things. Cotton \_\_\_\_\_ is very nice to wear, especially in hot weather, and is easy to move around in.

COTTON KEYWORDS

CLOTHING, SEEDS, PLANT, FIBRE, FABRIC, HAIR

**Cotton** is one of the best materials used in textile products as it is light in weight and absorbs moisture. The fabric is washable and is quite durable as well. Cotton yarn/threads can also be made into calico which is a strong fabric and ideal to print and dye.

## Learning Objective

To develop an understanding for ACCESSFM

To analyse and describe the features of existing Storage Cases.

**SO THAT**

## Learning Outcome

To use ACCESSFM to analyse storage cases.

**Key Words:** ACCESSFM, Aesthetics, Cost, Customer, Environment, Safety, Size, Function, Materials, Cotton

Lesson 3

### Lesson 3

**A**  
Aesthetics

Appearance. Use of colour, presentation, style... is it appealing?

**C**  
Cost

Does the product offer value for money?

**C**  
Consumer

How well does the product suit the intended consumer / customer / client?

**E**  
Environment

Is the product environmentally friendly? What effect does it have?

**S**  
Safety

Is the product safe to use? Are there hazards or risks?

**S**  
Size

Is the product a good and/or appropriate size?

Place a picture or sketch the product here, with detailed notes where appropriate.

**F**  
Function

What does it do? How well does the product do it?

**M**  
Materials

Are suitable materials used? What are the key properties?

**A**
